Mohammed Abu-Hadhoud

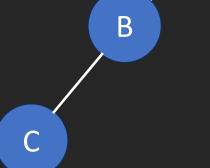

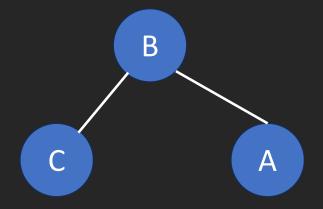

Right Rotation

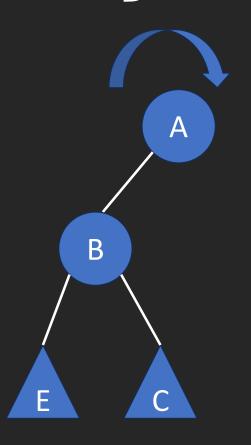

- The left child of the node becomes the new root of the subtree.
- The original root node becomes the right child of the new root.

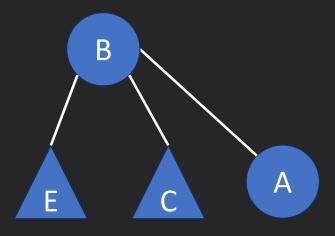

Used when a node becomes too left-heavy (balance factor of +2), particularly when its left child has a balance factor of +1 or 0

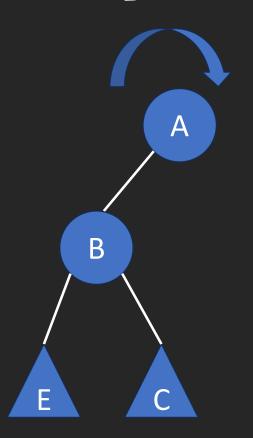

Right Rotation

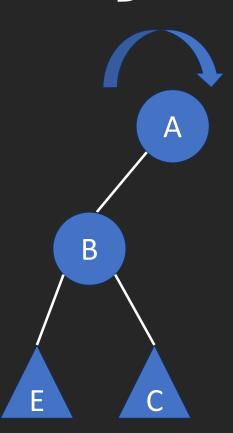

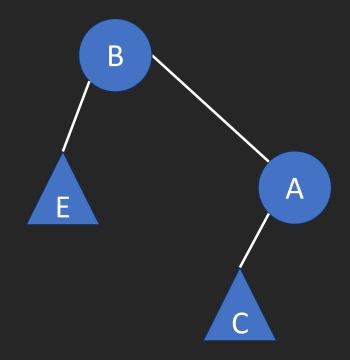

Right Rotation B

Right Rotation

- The left child of the node becomes the new root of the subtree.
- The original root node becomes the right child of the new root.
- If the new root already had a right child, it becomes the left child of the new right child (the original root).
