Client

Application
Running
On Client Machine

- Mobile
- Desktop
- Web
- TV
- Car
- Windows Service
- Any App

#### **OS**:

- Windows
- Android
- Linux
- IOS
- Any OS

#### Languages:

C#, Python, Java, C++..etc

Mohammed Abu-Hadhoud

### Main Elements of RESTful API?

A REST API fundamentally relies on three major elements:

- **Client**: The client is the software code or application that requests a resource from a server.
- Server: The server is the software code or application that controls the resource and responds to client requests for the resource.
- Resource: The resource is any data or content, such as text, video and images, the server controls and makes available in response to client requests.

# To access a resource, the client sends an HTTP request to the server.

Will be explained in the Next Lesson
